Xueren Ge

zar8jw@virginia.edu | xueren-ge.github.io | GitHub | Google Scholar | LinkedIn

Summary

Ph.D. candidate in **LLM post-training, multi-agent systems, and retrieval-augmented generation** on real-world clinical data. First-author papers at **ACL, AAAI (oral), and EMNLP**; LLM research intern at **Samsung Research America**. Seeking a Summer 2027 research or machine learning internship in LLM post-training and agentic systems.

Education

University of Virginia — Jun. 2022 – Dec. 2027 (expected)
Ph.D. in Computer Engineering, GPA 3.88/4.0 — *Charlottesville, VA*

Georgia Institute of Technology — Aug. 2020 – May 2022
M.S. in Electrical and Computer Engineering, GPA 3.91/4.0 — *Atlanta, GA*

Chongqing University — Sep. 2016 – Jun. 2020
B.E. in Electrical Engineering and Automation, GPA 3.58/4.0 — *Chongqing, China*

Industry Experience

Samsung Research America — May 2026 – Aug. 2026
LLM / Gen AI Research Intern | *Mentor: Jilong Kuang* — *Mountain View, CA*

- **FHIR-GRAMS: Graph-Normalized Records and a Multi-Agent System for Question Answering over FHIR EHRs**
  LLM agents, skills, tool use, information retrieval, Gemini API – paper under review
  - Designed a **planner–specialist–composer** framework: graph normalization flattens nested, reference-linked FHIR resources into canonical views, specialists project query-relevant evidence, and a composer reasons with retrieved skills and **deterministic tools instead of generated code**.
  - Beat single-agent CodeAct and the skill-optimized GRASP agent on **4 benchmarks** with two Gemini backbones: **+11.6 / +8.0 points** LLM-judged accuracy over the strongest baseline, best exact match on every benchmark, **100% / 96.7%** on MedAgentBench v1/v2, and **up to 2× fewer tokens** per query than multi-turn baselines.

SenseTime — Dec. 2020 – Jun. 2021
Algorithm Developer Intern | *Mentor: Ruodai Li* — *Shenzhen, China*

- **Contactless Vital-Sign Estimation from Thermal Video for the SenseThunder Air product**
  Python, signal processing, computer vision – 2 patents (CN113887474B, granted; WO2023061042A1)
  - Built a contactless heart-rate, respiratory-rate, and temperature estimator: landmark detection and homography track thermal regions of interest, and FFT plus bandpass filtering recover weak periodic signals from the video.
  - Delivered an end-to-end Python framework for preprocessing, evaluation, and error analysis for deployment.

Technical Skills

LLM training & inference: SFT, GRPO / DAPO, LoRA, verl, DeepSpeed, FSDP / DDP, vLLM, Hugging Face, W&B, Slurm
Agents, retrieval & evaluation: multi-agent systems, ReAct tool use, RAG, FAISS, knowledge graphs (UMLS), synthetic data, LLM-as-judge, Gemini / OpenAI APIs
Programming & infra: Python, C/C++, SQL, Java, JavaScript/TypeScript, MATLAB, LaTeX; PyTorch, TensorFlow; Linux, Docker, Git, AWS, Azure, HPC / Slurm, CUDA, NVIDIA Jetson

Research Experience

University of Virginia, Link Lab Jun. 2022 – Present
Graduate Research Assistant | Advisor: Homa Alemzadeh *Charlottesville, VA*

- **FHIR-R1: Distilling a Privileged-Information Teacher into a Healthcare QA Agent via OPSD**
  Healthcare QA agent, DAPO, OPSD, Qwen3-8B, LoRA, verl, vLLM, FHIR – in progress
  - Built a multi-turn ReAct **healthcare QA agent** with **16 deterministic tools** over patient FHIR records: trained a **Qwen3-8B** (LoRA) **teacher with privileged information** via **DAPO** in verl on **2,098** FHIR-AgentBench questions (up to **32K** tokens, exact-match reward), and am distilling it into a student without that information via **on-policy self-distillation (OPSD)**, adding a token-level teacher–student log-ratio signal on tool calls to the GRPO advantage.
- **DoC: Learning When to Defer or Commit in Conversational Diagnosis Prediction**
  SFT, GRPO, Qwen3, vLLM, DeepSpeed, W&B – under review
  - Proposed a **self-improving SFT loop** that regenerates turn-level Defer/Commit pseudo-labels with the updated policy from dialogue-level diagnosis labels only, requiring no human-annotated commitment times.
  - Combined Defer-aware SFT initialization with **trajectory-level GRPO** to jointly optimize commitment timeliness, first-commit accuracy, and post-commit stability beyond the supervised policy.
  - Post-trained **Qwen3-1.7B** to outperform Qwen3-4B and Doctor-R1-8B: **78.3% / 52.8%** first-commit accuracy on two real-world dialogue datasets and **43% / 24%** lower post-commit error than the strongest baseline on each.
- **EMSDialog: Synthetic Multi-person EMS Dialogue Generation from Patient Care Reports**
  Multi-LLM agents, EHR-grounded generation, LoRA, vLLM – ACL Findings 2026
  - Built an **EHR-grounded multi-agent generation pipeline** with iterative critique-and-refine, deterministic rule-based checkers, and an LLM style checker to improve clinical factuality, procedural realism, and naturalness.
  - Released **4,414** annotated conversations across **43 diagnoses** with speaker and topic labels; training on EMSDialog-augmented data improved conversational diagnosis accuracy, timeliness, and stability.
- **EMSQA: Expert-Guided Prompting and RAG for EMS Question Answering**
  RAG, FAISS, LoRA, DeepSpeed, vLLM – AAAI 2026 (oral)
  - Created the first EMS multiple-choice QA benchmark (**24.3K questions**, 10 subject areas, 4 certification levels) and a subject-aligned knowledge base of **40K documents and 4M patient care reports**.
  - Developed **Expert-CoT** and **ExpertRAG**: combined, up to **4.67%** accuracy gain over state-of-the-art RAG, and expertise-augmented **32B models passed every EMS certification simulation exam**.
- **DKEC: Domain-Knowledge-Enhanced Multi-Label Diagnosis Prediction**
  Knowledge graphs, UMLS, BERT, GNN, FSDP – EMNLP 2024
  - Built a medical knowledge graph from **3,000+** webpages via chain-of-thought prompting and the UMLS API, yielding **5,000+** normalized entities.
  - Designed **label-wise attention** to fuse the graph with language models, improving micro-F1 by **5%** over state of the art on MIMIC-III.
- **On-Device Multimodal Cognitive Assistant for Emergency Medical Services**
  PyTorch, CUDA, NVIDIA Jetson, ASR, vision-language models – IoTDI 2024, AAAI 2026
  - Cleaned EMS patient care reports with regex normalization and schema mapping; fine-tuned a **15M-parameter EMSTinyBERT** on 4K reports with group-wise training for rare classes.
  - Deployed it on an NVIDIA Jetson at **80.0%** accuracy and **0.31 s** latency; benchmarked zero-shot ASR and VLMs on EgoEMS.

Honors & Service

Honors: AAAI-26 Student Scholarship (2026); Georgia Tech Merit-Based Scholarship, top 5% (2020); Yangtze Power Scholarship (2018); MCM Meritorious Winner (2018)
Service: Reviewer for ACL, NAACL, ICLR, NeurIPS, AAAI, IJCAI, COLM, ACM TCH; EMNLP 2024 / AAAI 2026 volunteer; TA for two courses; mentored 5 students (four co-authored ACL, AAAI, EMNLP papers)
